SUMMARY

Analytics & Insights Engineer with 7+ years of experience converting complex data into actionable insights for sales and finance leaders. Enhances SQL, Python, and KNIME data pipelines, Tableau dashboards, and KPI frameworks to improve data quality, accelerate reporting, and reduce ad-hoc requests. Delivers measurable, double-digit efficiency gains by transforming manual and Alteryx-based processes into scalable, automated analytics solutions.

TECHNICAL SKILLS

- BI & Visualization: Tableau, Power BI
- Analytics Engineering & ETL: KNIME, AWS Glue, IBM DataStage, SAP LSMW
- Programming & Querying: Python, SQL
- Data Preparation & Analysis: Tableau Prep, Excel
- Data Platforms: Amazon Athena, SQL Server
- Additional Exposure: dbt, Snowflake, Agentic AI, Claude

PROFESSIONAL EXPERIENCE

Analytics & Engineer 2 | **DELOITTE**

Jun 2024 – Present

- Converted 15+ Alteryx workflows into KNIME-based ETL, consolidating repeated transformations into reusable nodes to support cost optimization and consistent dataset outputs.
- Built/automated 20+ ingestion pipelines with standardized input formats and transformation steps, cutting pipeline runtime and making releases repeatable across parallel projects.
- Executed large-scale data migrations across all testing and production cycles using IBM DataStage and SAP LSMW, resolving quality anomalies for two distinct projects.
- Delivered an interactive Tableau self-serve dashboard for Cash Plus Pilot (30+ client users), backed by automated datasets; reduced manual reporting requests by 60% within the pilot period.
- Rebuilt the Sales Executive KPI dashboard with clearer metric definitions and consistent filters, reducing ad-hoc query volume by 40%.
- Automated the generation of Tableau-ready charts from recurring Excel templates, saving ~90 minutes/month of manual rebuild work.
- Owned end-to-end delivery from dataset design → pipeline automation → validation → dashboard deployment.
- Triaged and fixed 12+ dashboard/data defects per release cycle, ensuring post-migration data accuracy and preventing stale metric outputs.

Senior Data Analyst – 2 | **SOLENIS**

Nov 2021 – May 2024

- Designed and streamlined a working capital dashboard to monitor cash flow, providing enhanced visibility into financial metrics for finance leadership, increasing usage by 30%.
- Built a working capital cash-flow dashboard and refined KPI definitions based on stakeholder feedback, increasing adoption/usage by 30%.
- Developed an executive KPI dashboard for weekly performance reviews, improving visibility into core operational metrics and trends.
- Produced monthly executive performance decks using standardized SQL extracts, translating operational data trends into actions and targets for leadership.
- Managed the company's most widely used Purchase Price Variance dashboard, processing millions of records to deliver actionable BU-level, category-level and financial insights to business leaders; maintained weekly and monthly reporting while implementing new metrics, visualizations, and business logic enhancements.
- Co-developed an interactive analytics view that surfaced \$450K+ cost reduction opportunities by segmenting spend/performance drivers and enabling targeted operational actions.

- Partnered with business owners for ad-hoc analytics requests, converting one-off questions into reusable datasets/KPI logic to reduce repeat work.
- Trained stakeholders on dashboard usage and metric definitions, improving engagement by 5–10% post-session.

Data Analyst | TCS

Apr 2019 – Nov 2021

- Built a PySpark ETL proof of concept on AWS to separate and analyze historical vs current datasets, enabling faster analysis-ready extracts for the team.
- Developed Tableau-KPI dashboards for operations leadership, surfacing key trends weekly.
- Replaced repetitive Excel workflows with Python automation, reducing manual effort and errors by ~60% for recurring reporting tasks.

PROFESSIONAL ACHIEVEMENTS

- Applause Award — Deloitte: Recognized for contributions to the Cash Plus Pilot and Sales Executive Insights Dashboard.
- Employee Award — Solenis: Honored for co-developing a raw-material procurement dashboard that identified savings opportunities and contributed to more than \$500,000 in cost savings.
- Client Recognition — Solenis: Received multiple commendations for delivering timely reports, actionable KPIs, and data-driven solutions that supported leadership discussions and decision-making.

PERSONAL PROJECTS

Purchase Intelligence – Agentic AI Use case

App Link: [Purchase Intelligence App](#)

GitHub Link: [Github Purchase Intelligence](#)

1. Agentic AI: Specialized agents validate purchase data, calculate quarterly spend and potential savings, then use Groq to cross-check totals and flag unusual patterns. The AI reviews the results but does not change the calculated figures or source purchases.
2. Technologies used: Python, Streamlit, pandas, Plotly, CSV data files, and Groq for AI-assisted analysis.

IPL Auction Analytics – IPL

App Link: [IPL Analytics App](#)

GitHub Link: [Github IPL Analytics](#)

- This tool aids decision-making by analyzing various unique parameters that teams consider when building their squads during auctions.
- **Tools used** – Python (Streamlit).

Data Analyst AI Agent

App Link: [Data Analyst AI Agent](#)

GitHub Link: [Github Data Analyst AI Agent](#)

- A lightweight, beginner-accessible proof of concept that translates business inquiries into data analysis using synthetic sales and procurement datasets. For every query, it generates a visual chart, a concise summary, a results table, and the underlying SQL code.

EDUCATION

Bachelor of Technology in Engineering | Gitam University

2015 – 2019

Course: Electronics and Communication Engineering
