PROFILE SUMMARY:

Analytics & Insights Engineer (7+ years) focused on turning messy data into reliable analytics. Build and maintain SQL/Python + KNIME-based ETL pipelines, validate data quality, and deliver Tableau dashboards + KPI datasets used by business teams across sales and finance. Experience migrating workflows from manual/Alteryx processes into automated pipelines, reducing report turnaround time and ad-hoc load by double digits.

SKILLS AND TOOLS:

BI & Visualization: Tableau, Power BI

Analytics Engineering & Migration: KNIME, AWS Glue, IBM DataStage, Alteryx, SAP LSMW

Programming & SQL: Python, SQL

Data Prep & Analytics: Tableau Prep, Excel

Data Platforms: AWS (Athena), SQL Server

Projects / Learning: dbt, Snowflake

PROFESSIONAL EXPERIENCE:

Analytics & Insights Engineer | Deloitte

June 2024 – Present

- Converted 15+ Alteryx workflows into KNIME-based ETL, consolidating repeated transformations into reusable nodes to support cost optimization and consistent dataset outputs.
- Built/automated 20+ ingestion pipelines with standardized input formats and transformation steps, cutting pipeline runtime and making releases repeatable across parallel projects.
- Executed large-scale data migrations across all testing and production cycles using IBM DataStage and SAP LSMW, resolving quality anomalies for two distinct projects.
- Delivered an interactive Tableau self-serve dashboard for Cash Plus Pilot (30+ client users), backed by automated datasets; reduced manual reporting requests by 60% within the pilot period.
- Rebuilt the Sales Executive KPI dashboard with clearer metric definitions and consistent filters, reducing ad-hoc query volume by 40%.
- Automated the generation of Tableau-ready charts from recurring Excel templates, saving ~90 minutes/month of manual rebuild work.
- Owned end-to-end delivery from dataset design → pipeline automation → validation → dashboard deployment.
- Triaged and fixed 12+ dashboard/data defects per release cycle, ensuring post-migration data accuracy and preventing stale metric outputs.

Senior Data Analyst 2 | Solenis

November 2021 – May 2024

- Built a working capital cash-flow dashboard and refined KPI definitions based on stakeholder feedback, increasing adoption/usage by 30%.
- Developed an executive KPI dashboard for weekly performance reviews, improving visibility into core operational metrics and trends.
- Produced monthly executive performance decks using standardized SQL extracts, translating operational data trends into actions and targets for leadership.
- Co-developed an interactive analytics view that surfaced \$450K+ cost reduction opportunities by segmenting spend/performance drivers and enabling targeted operational actions.
- Partnered with business owners for ad-hoc analytics requests, converting one-off questions into reusable datasets/KPI logic to reduce repeat work.
- Trained stakeholders on dashboard usage and metric definitions, improving engagement by 5–10% post-session.

Data Analyst | TCS

April 2019 – Nov 2021

- Built a PySpark ETL proof of concept on AWS to separate and analyze historical vs current datasets, enabling faster analysis-ready extracts for the team.
- Developed Tableau-KPI dashboards for operations leadership, surfacing key trends weekly.
- Replaced repetitive Excel workflows with Python automation, reducing manual effort and errors by ~60% for recurring reporting tasks.
